<b>SOLAR POWER</b>					
Systems include <u>5Watts - 80 Watts Photovoltaic Module</u> We carry Crouse Hinds Systems only. System include: 12 Volts CH Celled Electrolyte Battery Regulator Circuit Protector Enclosure <b>Most Common System Types are :</b> <b>Off Grid/ Remote Solar Basics-</b> is designed to battery power DC Loads anywhere, especially remotely with minimal capital investment. <b>On Grid Solar Basics :</b> The PV Panels are generally mounted on ground or a roof structure and the panel convert the sunlight into DC Power. Combiner boxes combine all the electricity from the strings of the PV Panels and sends to an inverter. The inverter converts the direct current-DC to alternate current-AC and sends to a central point, such as a breaker box, where it is distributed to the facility or an on-site storage system (battery).An excess power created by the On-Grid PV (PV-Photovoltaic) System can be transferred to the local utility through an electric meter (net metering/ grid-tie)			30" x 6' 8" PH Swing door, RH, interior, 6 panel , SC		96.43
